

RAJ PITHAVA

M.Sc. IT (Full Stack Development) Student

+91 9328620395 pithavaraj4@gmail.com Raj Pithava rajpanchal135

SUMMARY

I am an M.Sc. IT student specializing in Full Stack Development, with practical experience in creating real-world applications. My proficiency in Python, popular web technologies, and problem-solving abilities allows me to tackle projects effectively. I am passionate about leveraging my skills in software development to make a meaningful impact in a collaborative environment.

EDUCATION

M.Sc. IT in Full Stack Development

GLS University — Faculty of Computer Applications & IT

08/2025 – 05/2027 Ahmedabad, India

Bachelor of Computer Applications (BCA)

GLS University — Faculty of Computer Applications & IT

08/2022 – 05/2025 Ahmedabad CGPA: 7.96

H.S.C

Sunrise Smart School

06/2020 – 05/2022 Dhrangadhra 88.44%

S.S.C

Sunrise Smart School

06/2018 – 05/2020 Dhrangadhra 77.17%

CERTIFICATIONS

- Web Development — Great Learning
- Data Analysis — Microsoft
- Figma UI/UX — Simplilearn
- AWS S3 Workshop — GLS University
- CyberShadez Agentverse Workshop — GLS University

SKILLS

Python

MySQL

C/C++

HTML

CSS

Django

Flask

MongoDB

OOP

Data Structures

SQLite

Flutter

AWS S3

Figma

PROJECTS

SphereVision Lab Management System

Stack: Python | SQLite | TCP/IP | WebRTC | PBKDF2 | Windows APIs

A system to manage and automate lab operations

- Designed and built a cross platform distributed client-host system to manage and automate operations across lab computers
- Developed a secure authentication system using SQLite, PBKDF2 hashing, and OTP-based recovery
- Implemented a kiosk-mode client with OS-level restrictions to prevent unauthorized access
- Built a TCP socket communication layer for real-time login, file transfer, and command broadcasting
- Enabled instant file sharing and automated assignment collection via background synchronization
- Integrated dynamic IP detection for seamless, zero-configuration network setup
- Designed a modern GUI optimized for low latency and reliable LAN performance

File Transfer System

Stack: Python | FastAPI | WebSockets | JavaScript | Uvicorn

- Built a distributed real-time file transfer and remote execution platform for computer labs using FastAPI, WebSockets, and asyncio.
- Developed an admin dashboard for live monitoring and remote broadcasting, implemented bandwidth throttling, secure file handling, and automated client-side execution using Python-based agents.

Personalized Desktop Assistant

Stack: Python | OpenAI | SQLite | HTML/CSS | JavaScript

An AI-based desktop assistant

- Developing an AI-based desktop assistant with voice/text command support and task automation
- Completed front-end development; integrating backend for system tasks and real-time data fetching
- Working on OpenAI API integration for intelligent AI interactions and responses

Mini Projects

A collection of small projects showcasing key functionalities

- Django CRUD & Authentication System** — Built login, registration, and full database CRUD operations
- Habit Tracker (Flutter)** — Developed a basic mobile app for tracking daily activities and habits
